

Responsible Conduct of Research

Thursday, March 29, 2018 • Room D34115 • 1:30 – 4:30 p.m.

Presented by Robert E. Porter, PhD, Grant-Winners Seminars

Funding agencies are increasingly concerned that researchers and their students attain basic skills in responsible conduct of research, adhering to guidelines and standards that reflect best practices by the scientific research community. In addition to online courses, RCR training should include face-to-face interactions in a seminar environment. This session will utilize a comprehensive “RCR Quiz” to stimulate discussion, followed by case studies to be assessed in small groups.

Core topics include:

- Data acquisition and ownership
- Authorship and publication
- Peer review
- Conflicts of interest
- Research misconduct
- Human subjects
- Animal welfare
- Collaborative research
- Mentor/mentee relationships
